

video applications. One application is to capture a high quality digital image from an inexpensive LR camera for identification purposes. Typically, it is possible to display enlarged images and zooming of region of interest for identification application in surveillance, aerial, and satellite imaging. For identification purposes, a digital video recording the CCTV system, and identify objects in the scene such as the licence plate of a car. The system is also used in medical imaging such as ultrasound and magnetic resonance imaging. The combination of multiple images is used
